AIDS Res. Hum. Retroviruses 15:1315-1319(1999).
-i- FUNCTION: Receptor for the C-X-C chemokine CXCL16. Used as a coreceptor by SIVs and by strains of HIV-2 and m-tropic HIV-1.
-i- SUBCELLULAR LOCATION: Integral membrane protein coupled receptors.
-i- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                               NCBI_TaxID=9598;

Nature 388:296-300(1997).
-!- FUNCTION: Receptor for the C-X-C chemokine CXCL16. Used as a coreceptor by SIVs and by strains of HIV-2 and m-tropic HIV-1.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DOMAIN

Proc. Natl. Acad. Sci. U.S.A. 94:13414-13419(1997).

IF TUNCTION: This is a calmodulin-sensitive adenylyl cyclase. May be involved in regulatory processes in the central nervous system. It involved in regulatory processes in the central nervous system. It involved in regulatory acquisition and learning.

ICANALYTIC ACTIVITY: ATP = 3',5'-cyclic AMP + diphosphate.

ICOPACTOR: Binds 2 magnesium ions per subunit (By similarity).

INIXIME REGULATION: Activated by calcium/calmodulin. Inhibited by the G protein beta and gamma subunit complex.

INIXIME Composed of two homologous domains.

INIXIARITY: Belongs to the adenylyl cyclase class-4/guanylyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Krupinski J., Coussen F., Bakalyar H.A., Tang W.-J., Feinstein P.G., Orth K., Slaughter C., Reed R.R., Gilman A.G.; "Adenylyl cyclase amino acid sequence: possible channel- or transporter-like structure.";

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PRIOR FILING DATE: 1999-04-09
NUMBER OF SEQ ID NOS: 8344
SEQ ID NO 5990
Sequence 7704, Application US/09489039A

Sequence 7704, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION:

APPLICANT: GATY Breton et. al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING

TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 2709.2004001

CURRENT APPLICATION NUMBER: US/09/489,039A

CURRENT FILING DATE: 2000-01-27

PRIOR APPLICATION NUMBER: US 60/117,747
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium. And identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16-DEC-1999; 99JP-00377484.
